(black = Norm; blue = Mr. Clemens)

Hello again,

Thanks for confirming back to me the amount for Zone 1-1A Risk Management.

A couple of questions have come to me from folks that I will ask here.

Is the dollar cost the result of recasting the event as a single claim by the Risk Manager? Or, is it the result of adjustment within the Public Works Department.

The cost was not a result of Public Works Department adjustments. It is our understanding that Risk Management did recast the multiple claims as a single event rather than multiple events for purposes of their calculations.

What is the process/basis that will determine future cost?

It is our understanding that this methodology will continue to be used in the future.

What are the anticipated future reductions to the expense.

Assuming that there are no future claims in the Zone, there would be no specific allocation of charges to the Zone after fiscal year 2009/10.

Your help always is appreciated.

Cheers,

Norm
